## NEW GENERATION ASSET PLATFORM

Blockchain technology does not rely on additional third-party management agencies or hardware facilities, and there is no central control. Except for the self-contained blockchain itself, through distributed accounting and storage, each node realizes information self-verification, transmission and management. Decentralization is the most prominent and essential feature of blockchain.

# SMART CONTRACT

Smart contracts help you exchange property, shares, or anything of value in a transparent, conflict-free way

A smart contract, like any contract, establishes the terms of an agreement. But unlike a traditional contract, a smart contract terms are executed as code running on a blockchain like Ethereum. Smart contracts allow developers to build apps that take advantage of blockchain security, reliability and Peer accessibility while offering sophisticated peer to functionality everything from loans and insurance to logistics and gaming.
